

TUI Airline Management, a division of TUI Travel PLC, has implemented the **airpas** system within the existing Group Airlines as well as to newly integrated TUI Carriers since 2000.

Company Profile TUI Travel PLC

TUI Travel PLC is a new company formed by the merger of First Choice Holidays PLC and the Tourism Division of TUI AG. The world's leading tourism Group operates in 180 countries and serves more than 30 million customers in over 20 source markets offering a wide range of leisure travel experiences.

As a group, TUI Airlines form the largest leisure and low cost travel fleet with more than 150 aircraft and over 200 destinations worldwide. Being part of the TUI Aviation Group offers the members collaborative opportunities in many areas, for example in purchasing or fleet management.

The central fuel purchasing department procures an annual volume of 700 million US gallons for the seven Group Airlines, TUIfly, Thomson Airways, Corsairfly, ArkeFly, Jetairfly, Tuifly Nordic and Jet4you.

Challenge > Contract maintenance – replacement of obsolete system and optimization of reporting

“Our **airpas** based central contract maintenance and management system enables us to keep track of the 7 Group airlines and 500 airports fuel contract details which is like trying to tame wild animals.”

< Ms. Christine Freytag, TUI Travel PLC
Fuel Purchasing TUI Airline Management

Results & benefits

- Application quickly and effortlessly computes complex calculations saving valuable time and resources
- **airpas** is the cornerstone of airline financial management granting you the tools to support critical decision making and boosts your competitive edge

Solution

airpas is a basis to collect airline data from several systems and for central contract maintenance for several clients. It provides a real time contract status and a precise and detailed database for all parameters related to fuel costs to prepare and support contract negotiations and strategic planning.

Up to date fuel prices are transmitted directly to the flight operations to support the tankering decisions of the Group Airlines to refuel most cost efficiently.

The use of multi-client functionality results in less staff in the whole organization.
